Cybersecurity

Information sharing

May, 30th, 2023

Nadica Josifovski State Advisor for Information Systems and Technologies

Digital transformation

- rapid development of ICT technologies
- increased need of fast digital transformation
- digitalization of the services towards citizens and businesses

benefits & challenges

Cyber Threats Information Sharing

Importance of CTI sharing in:

- detecting and preventing
- help in overcoming cyber incidents
- Law on Electronic Communications, Article 26a: MKD-CIRT is central point for contact and coordinating response to security incidents at networks and computer systems.

• CTI includes:

- warning and advisories on newly found vulnerabilities
- Information collected through Threat Intelligence Feeds
- Information shared post-incident

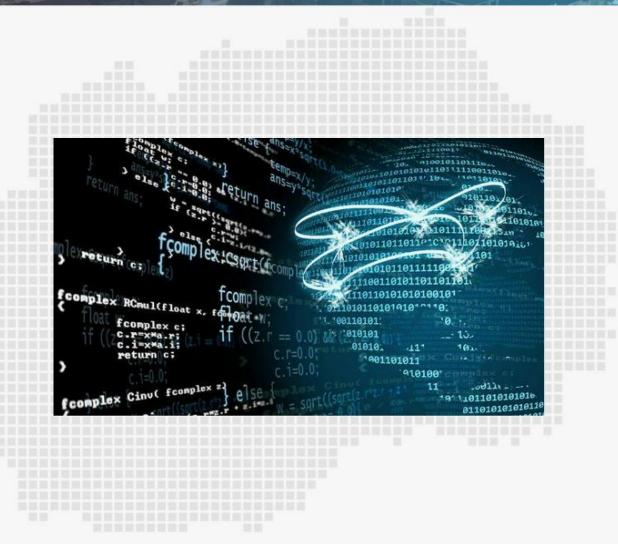

Cyber Threats Information Sharing

• MISP platform:

- Internal CTI sharing
- Available for all 130+ MKD-CIRT constituents
- help in overcoming cyber incidents

Constituents:

- the government and public sector institutions
- critical infrastructure operators
- large organizations in the strategic sectors like banking, transport, communication, health, energy, ...

Cyber Threats Information Sharing

Baseline security measures:

- Initiative taken by Government
- developed and proposed by MKD-CIRT

initiative on improving information sharing

- 1) each public administration institution to designate a role and appoint an employee as an security officer:
 - govern information security at that entity
 - points of contact with MKD-CIRT for CTI sharing
 - Improved identification & early detection
 - Empower MKD-CIRT in CTI sharing with its constituents
- 2) all public servants to take online training courses that are developed by MKD-CIRT

Legal environment

Laws on digitalization and services:

- General Administrative Procedure Act
- Law on Electronic Documents, Electronic Identification and Trust Services (eIDAS)
- Law on Electronic Management and Electronic Services
- Other relevant sectorial laws

New Law on Agency for digitalization:

- regulate all 4 pillars in Agency for digitalization: ICT infrastructure, ICT systems, Cybersecurity and Academia
- NIS2 directive will be transposed as part of this law

National Strategy for Cybersecurity 2023-2027

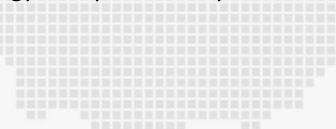

Contents:

- National capacities for cybersecurity: establishing and improving
- Security and resilience: critical infrastructure and national ICT systems
- Cybersecurity resilient society
- Minimizing the affect of cyber threats
- Improving cooperation

• Plans:

- Review and finalize draft text of National Strategy for Cybersecurity
- Prepare Action plan
- Adopt by Government
- Implement

What's next

- Continue with digitalization to the process within public institutions and digitalization of electronic services for citizens and businisses
- Increase overall digital literacy of the citizens
- Raise awareness of the public servants and the citizens for cybersecurity risks and prevention
- Improve information sharing within the country, on regional and on international level
- Establishing a digitally safe and resilient eco- system society
